

**Is It Possible to Index a SharePoint Site that
Has CES 4 Integration with CES 5**
Coveo Solutions

Applies to: CES 4 and 5

Question

When using *Coveo Enterprise Search 5*, the following error is displayed in the CES Console and *index.log* files if a *SharePoint* site that has *Coveo Enterprise Search 4* integrated is indexed:

SharePoint error was encountered while indexing (Cannot load the policy roles for the web application "http://HostName/".

Reason: The web service "http://HostName/_layouts/CES/EnhancedCrawling2007.asmx" was not found on the server (Client found response content type of 'text/html; charset=utf-8', but expected 'text/xml'. The request failed with an empty response.) http://HostName/

Is it possible to index the same *SharePoint* site with *Coveo Enterprise Search 4* and *5* at the same time?

Cause

- *Coveo Enterprise Search 4* uses *EnhancedCrawling.asmx* to index SPS 2003 / WSS 2 or MOSS 2007 / WSS 3.
- *Coveo Enterprise Search 5* uses *EnhancedCrawling.asmx* to index SPS 2003 / WSS 2 and *EnhancedCrawling2007.asmx* for MOSS 2007 / WSS 3. The Web services from *Coveo Enterprise Search 4* are not compatible with the ones from *Coveo Enterprise Search 5*, and vice-versa.

Answer

The Web services used by *Coveo Enterprise Search* to index *SharePoint* sites are not the same for version 4 and 5; therefore, it is not possible to index the same *SharePoint* site using both versions at the same time.
