

Coveo is a leading provider of advanced enterprise search technology and information access solutions, including mobile search solutions, for high performance businesses

Coveo was founded in 2005 to provide a more sophisticated, and yet easier to deploy and customize, enterprise search platform to help businesses access information and further leverage value from corporate IP and knowledge. Today, Coveo is a leader in enterprise search, and with its Coveo Enterprise Search 6.0 platform, continues to differentiate from legacy systems with its best-of-breed search platform that centrally indexes all enterprise knowledge and information, making it easily accessible to employees and departments across the enterprise.

Recognized today as the leading innovator in enterprise search and information access solutions, Coveo has changed the way information is found, utilized and valued. Among the company's industry firsts are multimedia search, mobile search for smartphones (such as the Blackberry), cross-enterprise email search, and cross-enterprise desktop search.

Built on a powerful, flexible and sophisticated platform, Coveo solutions combine structured and unstructured data, allowing users to swiftly navigate through the avalanche of corporate content and knowledge, helping to drive tangible business benefits and produce rapid return on investment. Broad capabilities optimize cross-enterprise business processes, facilitating eDiscovery, ensuring knowledge continuity and fostering productivity and collaboration among employees.

- ▶ Desktop Search Bar
- ▶ API's

Coveo Enterprise Search Platform

Coveo Enterprise Search 6.0 is a highly scalable and modular platform, enabling rapid deployment, self-service configuration and customization, and a significantly lower total cost of ownership, thanks to the central index footprint, which requires just a fraction of the footprint of the original information. Coveo's modular applications and connectors provide flexibility to meet today's business needs as well as future enterprise requirements for information access.

Coveo Enterprise Search Connectors enable always-on, live indexing and unified search of information stored in leading enterprise systems, from ERPs to KMS, CRM, email and archive systems and social media, including both SaaS and server-based applications.

Coveo has created more than thirty connectors, including:

- ▶ SharePoint
- ▶ Microsoft Exchange
- ▶ Symantec Enterprise Vault
- ▶ Jive
- ▶ Quest Archive Manager
- ▶ Confluence
- ▶ Lotus Notes
- ▶ Salesforce.com
- ▶ Database
- ▶ Open Text Livelihood
- ▶ Documentum

For non-core applications, Coveo utilizes third-party connectors to enable the search of virtually any enterprise system.

With a unique, customer-driven approach and risk-free proof-of-concept, Coveo contributes to the success of more than 600 customers globally, including: AmerisourceBergen, CA, California Water Service Co., Deloitte, ESPN, Haley & Aldrich, GEICO, Lockheed Martin, Odyssey America, P&G, Progress Software, PRTM, PricewaterhouseCoopers, Rabobank, SNC-Lavalin, Spencer Stuart, Theodoor Gilissen, and the U.S. Navy.
